The fully automatic cutting center for modern woodworking
New concept OptiCut S 90 DimterLine: Economical cutting including all options

High cutting accuracy, flexibility and maximum possible safety: the new automatic concept of the pushing saw OptiCut S 90 offers all this and moreover, it is highly productive. You can cut 4 times more with the OptiCut S 90 in comparison with a manual cross-cut saw - with half the staff. Or, you increase your timber yield by optimising. The defects marked by the operator are cut out and the maximum timber yield of the remaining quality timber is achieved according to the cutting list. Whether simple cutting solution or optimising, you decide on the degree of extension – now or later. Anyway the flexibility remains. For example with the function „Manual cutting“.
Whether packets, profiles, single boards or round dowels have to be cut, with the OptiCut S 90 all this is possible – almost without making adjustments on the machine. A wide model range meets every requirement: The all-purpose S 90, the S 90 XL – the power-pack for big cross sections, the S 90 Exact – for high-precision cuts, the S 90 Speed – with a capacity and speed that were, until now, only achieved by throughfeed saws. A machine concept that can be retro-fitted with many practically orientated options, and which is – with a moderate initial investment – upgradeable according to your requirements.

**OptiCut S 90 – the best argument for automatic length cutting**

- Reduced costs per piece due to 1-man-operation
- Up to 4 times more capacity than with a manual cross-cut saw
- Wide ranges of cross sections for the effective cutting of packets
- Maximum timber yield by optimising
- 120 m/min. feed speed with the S 90 Speed
- Absolute cutting accuracy and outstanding cutting quality
- Intelligent removal of waste
- Very easy to operate
- High flexibility from batch sizes of 1 upwards
- Robust and durable even in heavy-duty continuous operation
- Upgradeable to the optimising version
- Maximum operational safety
Feeding, positioning, clamping, cutting: WEINIG automatically secures safety

Adjustment of the stop, dangerous positioning, manual clamping and cutting – those times are definitely over. Each OptiCut S 90 carries out these steps exactly, fully automatically and totally effortlessly, even with unwieldy and heavy workpieces. A pusher feeds and positions the timber precisely. According to the model, traversing speeds of pusher of up to 300 m/min. are achieved – a considerable increase in productivity with maximum possible safety and highest convenience for the operator.

Automatic feeding, positioning and cutting
Workpieces with up to 150 kg are fed and positioned exactly and rapidly by a powerful pusher. The enclosed pusher guide is nearly maintenance-free and durable. The cut is released automatically.

High safety standard
With the OptiCut S 90 safe operation is possible: The complete saw area is clearly visible, but largely enclosed. The workpieces are automatically clamped during positioning, thus, it is impossible to reach into the cutting area.
OptiCut S 90: The all-purpose starter model

The OptiCut S 90 captivates with its flexibility. Whether you want to cut packets, profiles, single boards or even round dowels – from individual cutting to series production – on the OptiCut S 90 all this is possible, almost without adjustments on the machine. One of the remarkable features of the starter model of the Vario Series is the handling of workpieces with weights up to 100 kg with a positioning accuracy of ± 0.5 mm. The cutting in packets results in a multiplication of the cutting capacity. We find the best solution for your production as many options are available for the OptiCut S 90 and most of them (e.g. optimisation, sorting, label printer, etc.) can be retro-fitted.

OptiCut S 90 Exact: Cut after cut with highest precision

The OptiCut S 90 Exact distinguishes itself by high-precision cuts. The controlled lateral pressure for high angularity, the pusher system with positioning accuracy of ± 0.1 mm, and a special precision saw aggregate provide for utmost accuracy. This capacity in cutting will satisfy even the highest requirements. Demands for exact lengths, angular cuts and a smooth cutting surface are completely met. And even solutions for a decrease of the tear-out are available.
OptiCut S 90 XL: Specialist for packets and big cross sections

The OptiCut S 90 XL is specially designed for the handling of packets and big cross sections. Workpieces with a weight of up to 150 kg and a maximum cross section of 280 x 180 mm or 420 x 40 mm can be processed on this saw. Even with big cross sections a surprisingly high cutting capacity and length accuracy are possible. It goes without saying that practical options are available for the OptiCut S 90 XL. Robust mechanisation and sorting solutions – also for big cross sections – make the handling of heavy workpieces easier.

OptiCut S 90 Speed: A solid performer that gets your production up to speed

The OptiCut S 90 Speed achieves as a pushing saw for the first time the breakthrough into the performance range of throughfeed saws. The top model Speed captivates with pure capacity and impresses with top speed in the production process – always keeping a sharp eye on the timber yield by means of full optimisation. The back stroke, the positioning and the cutting speed achieve in their combination a capacity that was only possible with throughfeed saws until now. Certainly, with all the advantages of a pushing saw: flexibility, accuracy and protection of the workpiece.
MillVision simplifies your production process, maximises the yield, minimises the production costs and provides you with exact statistics: With different orders summarized in one cutting list, MillVision optimises the production process and ensures shorter production times. Producing more fixed lengths and less waste means lower investment in timber and therefore more profit. Higher productivity means lower inventory costs and less semi-finished products, improved material flow and reduced effort. MillVision compiles the whole production planning at a single blow.

**MillVision deals with quite a lot of wood**
Minimum batch sizes or series – with MillVision you work production orientated and optimise your production process. No matter whether you produce windows, floorings, furniture, kitchen cabinets, packing material, solid wood panels, etc.

**MillVision simply works**
MillVision is ready for immediate application anywhere. Without any problem, the data are picked up from existing programs or order lists. You decide about the raw material and the cross section to be treated on the machine – a push on the Touchscreen – and there you go.

**MillVision works automatically**
From all customer orders that have to be processed, MillVision searches all workpieces of the chosen timber species with the corresponding cross section and profile and compiles the corresponding cutting lists that are directly transmitted to the OptiCut.

**MillVision organises perfectly**
The cut pieces are marked clearly directly after the cutting process by means of an integrated label or inkjet printer. Furthermore, the OptiCut reports the status of cut pieces and additional information back to MillVision. Thus, all data of each single part can be identified always and at each point of the production process.

Certainly, further production machines like double-end profilers, Conturex, Powermat or Unicontrol can be integrated into the system. This will significantly reduce your organisational work and you always have a perfect overview.
Simple user interface, clearly arranged and detailed production statistics, optimum timber yield and maximum profit – that is OptiCom Direct, the intuitive Touchscreen control of the OptiCut. All important operational controls at a glance and the ideal connection to MillVision.

Further advantages: Reliable operation without hard disk • Secure saving on flash card • Possibility of direct printer connection • Can be directly integrated in Ethernet networks • Easy generation of cutting lists and statistics evaluation in the office • The ideal solution for linking management and production • Possibility of integration into branch specific solutions and customer networks.

OptiCom Direct: Easy operation, more profit
Cutting solutions by WEINIG: The ultimate turnkey package for the OptiCut S 90

WEINIG makes cutting perfect: Solutions after the saw

After the cutting, the precisely cut lengths are ideally controlled. Via the patented waste gate the pieces are delivered to an automatic sorting. The simple handling increases productivity and reduces your costs per piece. We offer complete solutions, specific to the customers’ requirements, for a modern and future-orientated production.

Waste pieces are reliably discharged directly after the cutting by means of the patented waste gate – for highest safety in operation. In addition, the wide opening eliminates unnecessary cuts in long waste pieces. Nevertheless, shortest accepted lengths can be reliably sorted via the automatically closed gap.

Each model can be equipped with the automatic sorting directly behind the saw blade. The ejectors can be activated separately. Also for the cutting of packets that are put on top of each other, it is possible to do the sorting at any number of sorting stations since the boards are delivered directly, i.e. without a level difference between sorting belt and table.
OptiCut cross-cut saws are designed for highly automated working so that you can deploy your staff for tasks that demand more. An enormous increase in capacity is provided by cross feeding devices, where the machine can feed itself automatically with material coming from a buffer magazine. Furthermore, for the OptiCut S 90 Speed a clamping device is available that makes the machine even more efficient. Thus, in combination with a cross feeder, reliable high daily performances are achieved.

The cutting solutions from DimterLine are automated cross-cut lines with peak performance coupled with a high safety. Cutting is one of the most important processes in the working of solid wood since already at this point the yield, and with it the quantity of material that is available later on, is determined. By means of the intelligent optimising software you always make the best of your timber – the maximum profit. The operator marks only the timber defects and/or different grades of quality, the rest is carried out independently by the machine: precisely, quickly, with a minimum percentage of waste.
WEINIG cross-cutting systems: Expandable investments in your future

The OptiCut is prepared for the future development of your factory: Many options can be retro-fitted at a later time. For instance, each OptiCut with “automatic length measuring” and “detection of defects” is an adequate optimising cross-cut saw. Intelligent options include, amongst others, printers for clear marking of the workpieces and the automatic stacker OptiCut Stacker.

For the clear identification of the pieces after the cutting, inkjet or label printers are used.

The inkjet printer marks the material fully automatically with the requested data as e.g. length, quality or commission numbers. The workpiece can be marked from top, from the side or even on the face – without any loss in capacity on the saw.

With the label printer labels can be generated and applied fully automatically, with the printer being completely integrated into the control of the OptiCut S 90. Due to the bar code, the identification of the piece becomes even machine-readable and further machines in the production process can even adapt themselves correspondingly to the workpiece. Individual designs of the labels are no problem in this situation.

Turn your OptiCut into a fully automatic cross-cut line. We offer you the customised peripheral equipment in a modular system. Fully automated lines with cross feeding and a subsequent OptiCut Stacker for the automatic stacking of preferred lengths will enable you to cut more with less staff but with reliable high daily performances.
Overview table OptiCut S 90 Series: Standards and options

The matrix shows the basic technical data of the machine series. Your WEINIG expert will voluntarily provide you more detailed information in consideration of your individual requirements.

These are standard values for a better overview. Ask us if your requirements differ. Depending on the design of the machine the technical data may change ( ) = optional

You can expect a lot from us: WEINIG – your partner for the future

Your one-stop shop
Your production is a complex system where everything has to fit. Short distances and perfect work organization are important factors. With WEINIG you have a full-line supplier as partner. Use this advantage for automation, tool preparation and much more all around your machine.

The WEINIG ExpoCenters
In our ExpoCenters we will show you what top technology can do for you. Here you can see our machines in action.

Training
We would like you to get the maximum benefit from your investment as quickly as possible. This is achieved using the proven WEINIG training concept. Effective training sessions led by experienced WEINIG experts make sure that you unlock the full potential of your machine in the shortest possible time.

Service
With sites in all parts of the world and a large, mobile team of service technicians, we guarantee a worldwide service that is unique in the industry. Extremely fast delivery of spare parts to any location and contacts who also speak your language are part of our traditional customer orientation.
WEINIG is synonymous with technological advancement. And has been for more than 100 years. WEINIG quality allows our partners around the world both in handcrafts and industry to stand out above the competition. With machines and systems that set standards in performance and economy. With intelligent production concepts for optimal value creation. And with customised solutions – from application through to service.
